# Technical Support

Symantec Technical Support maintains support centers globally. Technical Support's primary role is to respond to specific queries about product features and functionality. The Technical Support group also creates content for our online Knowledge Base. The Technical Support group works collaboratively with the other functional areas within Symantec to answer your questions in a timely fashion. For example, the Technical Support group works with Product Engineering and Symantec Security Response to provide alerting services and virus definition updates.

Symantec's support offerings include the following:

- A range of support options that give you the flexibility to select the right amount of service for any size organization
- Telephone and/or Web-based support that provides rapid response and up-to-the-minute information
- Upgrade assurance that delivers software upgrades
- Global support purchased on a regional business hours or 24 hours a day, 7 days a week basis
- Premium service offerings that include Account Management Services

For information about Symantec's support offerings, you can visit our Web site at the following URL:

[www.symantec.com/business/support/](http://www.symantec.com/business/support/)

All support services will be delivered in accordance with your support agreement and the then-current enterprise technical support policy.

## Contacting Technical Support

Customers with a current support agreement may access Technical Support information at the following URL:

[www.symantec.com/business/support/](http://www.symantec.com/business/support/)

Before contacting Technical Support, make sure you have satisfied the system requirements that are listed in your product documentation. Also, you should be at the computer on which the problem occurred, in case it is necessary to replicate the problem.

When you contact Technical Support, please have the following information available:

- Product release level

- Hardware information
- Available memory, disk space, and NIC information
- Operating system
- Version and patch level
- Network topology
- Router, gateway, and IP address information
- Problem description:
  - Error messages and log files
  - Troubleshooting that was performed before contacting Symantec
  - Recent software configuration changes and network changes

## Licensing and registration

If your Symantec product requires registration or a license key, access our technical support Web page at the following URL:

# Introducing Patch Policy updates

This chapter includes the following topics:

- [About the Patch Policy updates](#)
- [Getting Patch Policy updates through LiveUpdate](#)
- [Enhancements to the Patch module in Security Updates](#)

## About the Patch Policy updates

The Patch Policy updates are released twice a month. These updates add, enhance, and update the Patch policy and the associated template files on the Symantec ESM manager. Symantec updates the patch templates with the Symantec ESM policy installer.

## Getting Patch Policy updates through LiveUpdate

To get Patch policy updates through LiveUpdate for 6.5 or later managers, select the Patch Policies - OS Comprehensive LiveUpdate package in the Enterprise Security Manager 6.5 or later Content Updates section. The Comprehensive package contains the checks that apply to the platforms that are supported only on ESM 6.5 or later.

The policy installer executable applies to all versions of ESM and is available at the following location:

<http://securityresponse.symantec.com/>

---

**Note:** As per the End of Life product support policy, ESM Patch policy updates on ESM 6.0 or earlier are not supported from Patch Policy (Windows) Update 2008.10.02.

---

---

**Note:** If Java is installed on a Solaris 9 agent, install the JDK using the tar archive file containing packages, available from Sun. If you install the JDK using a selfextracting shell archive file, the module will not report vulnerability information for it because no specific packages are installed.

---

---

**Note:** SU 26 now supports Solaris x86. If you do not have the current modules for SU 26, you will see duplicate messages for patches. To remove these duplicate messages, you must update your modules to SU 26 or newer.

---

## Enhancements to the Patch module in Security Updates

Every Security Update includes updates to the Patch module. Upgrading to the latest Security Update provides you with the most accurate patch detection.

[Table 1-1](#) describes the enhancements to the Patch module in the latest Security Updates.
