

Businesses and organizations of all kinds rely on websites, intranets, and extranets to exchange confidential information and enable eCommerce. For businesses, protecting intellectual property as well as customer data in transit is a top priority. Just as important, consumers need to know that they can trust their online transactions.

Secure Sockets Layer (SSL) certificates are used to verify the legitimacy of websites and to encrypt information in transit. Managing certificates can be challenging when servers are deployed across various divisions and locations. Complexity increases as an organization expands its SSL certificate inventory to keep pace with growth. A centralized and flexible solution is needed to simplify the comprehensive management of SSL certificates across the enterprise.

Gaining unmatched confidence from a comprehensive solution

Symantec™ Managed PKI (MPKI) for SSL cloud-based management console provides centralized control and delegated administration of all your Symantec SSL and code-signing certificates. Extended Validation (EV) and premium certificates include vulnerability assessments and malware scanning to assist in website protection. MPKI for SSL is ideal for a large enterprise that needs to deploy and manage large numbers of SSL certificates.

Symantec MPKI for SSL facilitates centralized control and comprehensive lifecycle management of Symantec SSL and code-signing certificates across the enterprise.

Key Features and Benefits

Features

- Capacity to manage thousands of SSL and code-signing certificates.
- Cloud-based console for easy and rapid deployment.
- Delegated administration and role-based access for security and control.
- Instant issuance of certificates on pre-approved domains for rapid response to business needs.
- Option to choose from three different encryption algorithms—RSA, ECC, and DSA.
- Detailed reports and audit trails for accountability and compliance verification.
- Award-winning support for resolution of issues.

Benefits

- Inspire trust and confidence in customers and stakeholders.
- Select the vendor chosen by 94 of the 100 largest financial institutions worldwide.*
- Keep pace with business growth while increasing operational efficiency.

Protecting data in transit

Symantec MPKI for SSL supports a full range of code-signing products and SSL certificates including the following:

- Extended Validation SSL
- Subject Alternative Name (SAN)
- Wildcard SSL
- Intranet certificates

Full algorithm agility

In addition to the RSA algorithm, Symantec MPKI for SSL supports two newly introduced encryption algorithms — *Elliptic Curve Cryptography (ECC)* and *Digital Signature Algorithm (DSA)*—for full algorithm agility.

Managing SSL certificates in heterogeneous environments

Symantec Certificate Intelligence Center (CIC), an add-on option with MPKI for SSL, enables advance discovery of all SSL certificates across multiple Certification Authorities (CA):

- Gain complete visibility into all SSL certificates across your enterprise, regardless of the issuing CA.
- Maintain business continuity and prevent unknown certificate expirations by identifying rogue certificates and bringing them under management.
- Increase efficiency with a cloud-based service.

Issuing and tracking private intranet certificates

Symantec Private Certification Authority (CA) is a cost-effective solution to improve the security and management of private intranet certificates while adhering to corporate and industry compliance standards:

- Consolidate the management of public and private certificates.
- Bring an end to unexpected expirations with superior visibility on a single console.
- Avoid the errors and hidden costs often associated with self-signed certificates.
- Maintain compliance by issuing certificates without concern of changing regulations affecting SSL certificates chained to public roots.
- Mitigate security risks by separating roles and responsibilities between administrators and requestors.

- Leverage the validation infrastructure with 100 percent uptime since 2004.
- Take advantage of the robust infrastructure that supports an average of 6 billion Online Certificate Status Protocol (OCSP) lookups every day.
- Manage and control the deployment of SSL certificates and website protection services from a central console.
- Manage the complete SSL certificate lifecycle with delegated administration, role-based access, and instant issuance of certificates.
- Get up to 24x7 technical assistance with our award-winning support team.

*Includes Symantec subsidiaries, affiliates, and resellers (based on *Forbes* Global 2000 list, 2013, and internal customer analysis, July 2013)

Going beyond SSL with trust services and information protection

MPKI for SSL offers a broad range of additional service options, all in a single solution:

- Activate an assessment to identify critical vulnerabilities on your website.
- Scan for malware to avoid propagation of viruses to customers' systems.
- Turn on Symantec Seal-in-Search to increase traffic to your site.

Leveraging award-winning support

Symantec provides support that will help ensure your business continuity. Support is based on annual subscription with different offerings to meet your needs.
