

The dramatic increase in employee-owned Apple and Android devices entering the workplace and the increasing requirement to be able to build or buy and distribute custom corporate apps for mobile use brings a number of challenges for enterprise IT.

Nukona App Center™, Standard Edition

Nukona App Center, Standard Edition is designed to provide IT with everything they need to create a private, corporate-branded app store and be able to distribute both native and web apps to employees and other authorized users

Enterprise App Store

Nukona has designed the App Center to be extremely easy to use for developers, IT administrators and users.

An App Center is typically set up and configured in minutes, allowing apps to be distributed to employees and other authorized users with appropriate corporate security and with the appropriate corporate branding.

App Center app and user policy management features include:

- Drag-n-drop app deployment
- Intuitive administrative web portal user interface
- Easy on-boarding with email invitations to new users and notifications of app updates
- Customized Access with Tiered Privacy Controls

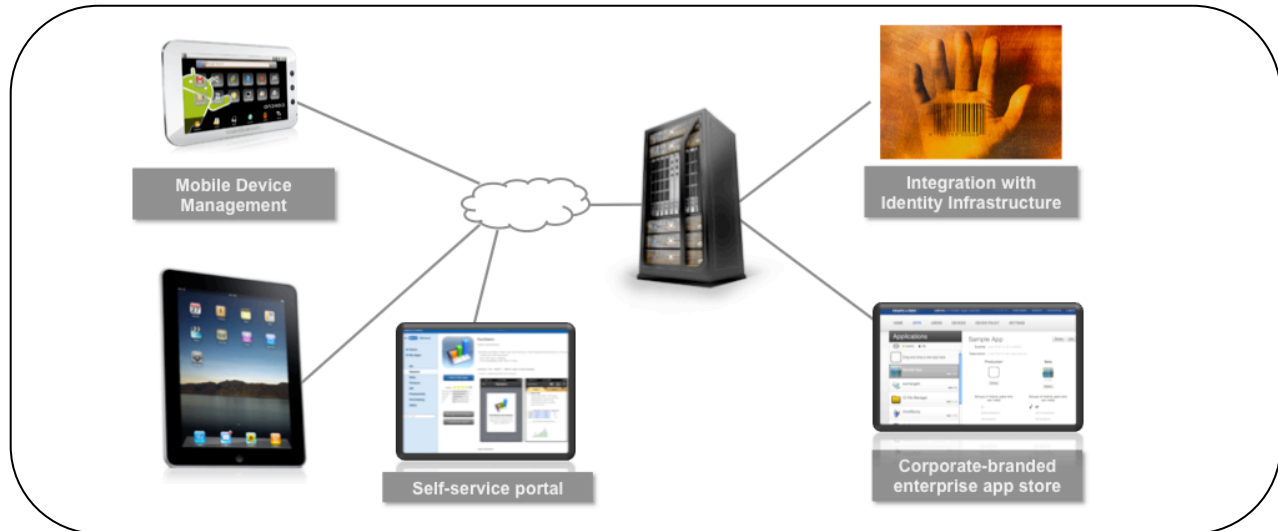

Mobile Device Management

Standard Edition also features full Mobile Device Management (MDM). With device management enabled, corporate IT can manage the devices that are accessing their data center, and enforce the device security policies they need, including:

- Lock device
- Wipe device
- Ping device
- Limit device functionality
- Dissociate device
- Password complexity rules enforcement
- Password reset

Nukona App Center, Standard Edition Components

Additional Features

Self-Service Portal

- Users can manage their own apps from any browser
- Custom categories for easy app grouping and searching
- Consumer-style app reviews and feedback

Mobile Device Management (MDM)

- Lock / wipe / ping / dissociate device
- Limit device functionality
- Password complexity rules enforcement and reset

Multiple Deployment Options

- Cloud-based (default)
- On-premise - Private Cloud
- On-premise – Virtual Appliance

Enterprise Reporting

- Standard reports on app usage, users, connectivity, app downloads, data access requests, real-time metrics
- Advanced reports on apps, users and devices, custom analytics

Who Should Use Standard Edition?

Any organization looking to create their own enterprise app store, carefully control the app and user distribution policies and manage access to their users' mobile devices.

Supported Devices

The initial supported device operating systems are Apple's iOS 4.x and above and Android 1.6 and above. Certain device security capabilities are not supported versions of Android prior to Android 2.2, it is left up to each IT organization to determine whether such devices will be allowed access to corporate resources and data.
