

Symantec Statement of Direction: Support for Linux on Power Servers With High Availability and Storage Management Solutions

Symantec plans to work with IBM to deliver the Veritas Storage Foundation High Availability product family for Linux on Power servers by the end of 2009. These high availability and storage management solutions will help clients consolidate Linux applications on IBM Power servers, leveraging the benefits of IBM's leading Power server platform and Symantec's leading data center infrastructure software. These joint Symantec and IBM solutions will help organizations reduce cost and complexity in their data centers.
