The purpose of the Voluntary Product Accessibility Template, or VPAT™, is to assist Federal contracting officials and other buyers in making preliminary assessments regarding the availability of commercial “Electronic and Information Technology” products and services with features that support accessibility. It is assumed and recommended that offerors will provide additional contact information to facilitate more detailed inquiries by government purchasers.

Symantec supports the U.S. Government's efforts to increase access to electronic and information technology (E&IT) for the disabled. Symantec, upon request, can provide Voluntary Product Accessibility Templates (VPATs) to demonstrate accessibility. Symantec does not certify that its software products, services or appliance solutions are compliant with the Rehabilitation Act, Section 508 requirements.

The first table of the Template provides a summary view of the Section 508 Standards. The subsequent tables provide more detailed views of each subsection. There are three columns in each table. Column one of the Summary Table describes the subsections of subparts B and C of the Standards. The second column describes the supporting features of the product or refers you to the corresponding detailed table, e.g., “equivalent facilitation.” The third column contains any additional remarks and explanations regarding the product. In the subsequent tables, the first column contains the lettered paragraphs of the subsections. The second column describes the supporting features of the product with regard to that paragraph. The third column contains any additional remarks and explanations regarding the product.

For questions or support with this Symantec VPAT please contact: VPAT_support@symantec.com
Please include specific Product Name and Version Number within your inquiry.

Product Information:

Product Full Name, Suite, Bundle, Platform & Acronym (ex. NetBackUp = NBU, IT Management Suite = ITMS):

| Ghost Solution Suite |

Product Previous / Last / Most Recent Release Version Number:

| 3.2 |

Type of Product Release:

| Minor Product Release |

Additional Products Included in this Bundle, Suite or Platform (ex. ITMS includes Asset, Server & Client Management Suites):

| N/A |

Product Modules, OS, APP, Add-On or Sub-component list all included and assessed (ex. Win / Unix / Mac / other):

| Windows |

Please review the "VPAT Terms" below before completing the form details:

**Supports** = Use this language when you determine the product fully meets the letter and intent of the Criteria.

**Supports with Exceptions** = Use this language when you determine the product does not fully meet the letter and intent of the Criteria, but provides some level of access relative to the Criteria.

**Supports through Equivalent Facilitation** = Use this language when you have identified an Alternate way to meet the intent of the Criteria or when the product does not fully meet the intent of the Criteria.

**Supports when combined with Compatible AT** = Use this language when you determine the product fully meets the letter and intent of the Criteria when used in combination with Compatible AT. For example, many software programs can provide speech output when combined with a compatible screen reader (commonly used assistive technology for people who are blind).

**Does not Support** = Use this language when you determine the product does not meet the letter or intent of the Criteria.

**Not Applicable** = Use this language when you determine that the Criteria do not apply to the specific product.

**Not Applicable - Fundamental Alteration Exception Applies** = Use this language when you determine a Fundamental Alteration of the product would be required to meet the Criteria (see the U.S. Access Board Standards for the definition of "fundamental Alteration").

### Section 1194.21 Software Applications and Operating Systems – Detail

<table>
<thead>
<tr>
<th>Criteria</th>
<th>Supporting Features</th>
<th>Remarks &amp; Explanations</th>
</tr>
</thead>
<tbody>
<tr>
<td>(a) When software is designed to run on a system that has a keyboard, product functions shall be executable from a keyboard where the function itself or the result of performing a function can be discerned textually.</td>
<td>Supports</td>
<td>Application uses standard Windows controls, which support keyboard access.</td>
</tr>
<tr>
<td>(b) Applications shall not disrupt or disable activated features of other products that are identified as accessibility features, where those features are developed and documented according to industry standards. Applications also shall not disrupt or disable activated features of any operating system that are identified as accessibility features where the application programming interface for those accessibility features has been documented by the manufacturer of the operating system and is available to the product developer.</td>
<td>Supports</td>
<td>Application does not explicitly disrupt or disable accessibility features of other products or the operating system.</td>
</tr>
<tr>
<td>(c) A well-defined on-screen indication of the current focus shall be provided that moves among interactive interface elements as the input focus changes. The focus shall be programmatically exposed so that Assistive Technology can track focus and focus changes.</td>
<td>Supports</td>
<td>Application uses standard Windows controls.</td>
</tr>
<tr>
<td>(d) Sufficient information about a user interface element including the identity, operation and state of the element shall be available to Assistive Technology. When an image represents a program element, the information conveyed by the image must also be available in text.</td>
<td>Supports</td>
<td>Application uses standard Windows controls.</td>
</tr>
<tr>
<td>(e) When bitmap images are used to identify controls, status indicators, or other programmatic elements, the meaning assigned to those images shall be consistent throughout an application's performance.</td>
<td>Supports</td>
<td>This is a standard design principle, which we try to adhere to.</td>
</tr>
</tbody>
</table>
(f) Textual information shall be provided through operating system functions for displaying text. The minimum information that shall be made available is text content, text input caret location, and text attributes.

(g) Applications shall not override user selected contrast and color selections and other individual display attributes.

(h) When animation is displayed, the information shall be displayable in at least one non-animated presentation mode at the option of the user.

(i) Color coding shall not be used as the only means of conveying information, indicating an action, prompting a response, or distinguishing a visual element.

(j) When a product permits a user to adjust color and contrast settings, a variety of color selections capable of producing a range of contrast levels shall be provided.

(k) Software shall not use flashing or blinking text, objects, or other elements having a flash or blink frequency greater than 2 Hz and lower than 55 Hz.
When electronic forms are used, the form shall allow people using Assistive Technology to access the information, field elements, and functionality required for completion and submission of the form, including all directions and cues.

### Section 1194.22 Web-based Internet Information and Applications - Detail

<table>
<thead>
<tr>
<th>Criteria</th>
<th>Supporting Features</th>
<th>Remarks &amp; Explanations</th>
</tr>
</thead>
<tbody>
<tr>
<td>(a) A text equivalent for every non-text element shall be provided (e.g., via &quot;alt&quot;, &quot;longdesc&quot;, or in element content).</td>
<td>Not Applicable</td>
<td>The main GSS product is a standalone thick application. GSS has a supplementary web console but it does not work over the internet and just works over intranet.</td>
</tr>
<tr>
<td>(b) Equivalent alternatives for any multimedia presentation shall be synchronized with the presentation.</td>
<td>Not Applicable</td>
<td>GSS does not have any multimedia content.</td>
</tr>
<tr>
<td>(c) Web pages shall be designed so that all information conveyed with color is also available without color, for example from context or markup.</td>
<td>Supports</td>
<td>The main GSS product is a standalone thick application. GSS has a supplementary web console that adheres to Symantec UX best practices.</td>
</tr>
<tr>
<td>(d) Documents shall be organized so they are readable without requiring an associated style sheet.</td>
<td>Not Applicable</td>
<td>The main GSS product is a standalone thick application. GSS has a supplementary web console that adheres to Symantec UX best practices.</td>
</tr>
<tr>
<td>(e) Redundant text links shall be provided for each active region of a server-side image map.</td>
<td>Not Applicable</td>
<td>The main GSS product is a standalone thick application. The supplementary web console does not work over the internet.</td>
</tr>
</tbody>
</table>
(f) Client-side image maps shall be provided instead of server-side image maps except where the regions cannot be defined with an available geometric shape.

Not Applicable

The main GSS product is a standalone thick application. The supplementary web console does not work over the internet.

(g) Row and column headers shall be identified for data tables.

Not Applicable

The main GSS product is a standalone thick application. The supplementary web console does not work over the internet.

(h) Markup shall be used to associate data cells and header cells for data tables that have two or more logical levels of row or column headers.

Not Applicable

The main GSS product is a standalone thick application. The supplementary web console does not work over the internet.

(i) Frames shall be titled with text that facilitates frame identification and navigation

Not Applicable

The main GSS product is a standalone thick application. The supplementary web console does not work over the internet.

(j) Pages shall be designed to avoid causing the screen to flicker with a frequency greater than 2 Hz and lower than 55 Hz.

Not Applicable

The main GSS product is a standalone thick application. The supplementary web console does not work over the internet.

(k) A text-only page, with equivalent information or functionality, shall be provided to make a web site comply with the provisions of this part, when compliance cannot be accomplished in any other way. The content of the text-only page shall be updated whenever the primary page changes.

Not Applicable

The main GSS product is a standalone thick application. The supplementary web console does not work over the internet.
When pages utilize scripting languages to display content, or to create interface elements, the information provided by the script shall be identified with functional text that can be read by Assistive Technology.

When a web page requires that an applet, plug-in or other application be present on the client system to interpret page content, the page must provide a link to a plug-in or applet that complies with §1194.21(a) through (i).

When electronic forms are designed to be completed on-line, the form shall allow people using Assistive Technology to access the information, field elements, and functionality required for completion and submission of the form, including all directions and cues.

A method shall be provided that permits users to skip repetitive navigation links.

When a timed response is required, the user shall be alerted and given sufficient time to indicate more time is required.

</tbody>
</table>
(a) Telecommunications products or systems which provide a function allowing voice communication and which do not themselves provide a TTY functionality shall provide a standard non-acoustic connection point for TTYs. Microphones shall be capable of being turned on and off to allow the user to intermix speech with TTY use.

(b) Telecommunications products which include voice communication functionality shall support all commonly used cross-manufacturer non-proprietary standard TTY signal protocols.

(c) Voice mail, auto-attendant, and interactive voice response telecommunications systems shall be usable by TTY users with their TTYs.

(d) Voice mail, messaging, auto-attendant, and interactive voice response telecommunications systems that require a response from a user within a time interval, shall give an alert when the time interval is about to run out, and shall provide sufficient time for the user to indicate more time is required.

(e) Where provided, caller identification and similar telecommunications functions shall also be available for users of TTYs, and for users who cannot see displays.

(f) For transmitted voice signals, telecommunications products shall provide a gain adjustable up to a minimum of 20 dB. For incremental volume control, at least one intermediate step of 12 dB of gain shall be provided.
(g) If the telecommunications product allows a user to adjust the receive volume, a function shall be provided to automatically reset the volume to the default level after every use.

(h) Where a telecommunications product delivers output by an audio transducer which is normally held up to the ear, a means for effective magnetic wireless coupling to hearing technologies shall be provided.

(i) Interference to hearing technologies (including hearing aids, cochlear implants, and assistive listening devices) shall be reduced to the lowest possible level that allows a user of hearing technologies to utilize the telecommunications product.

(j) Products that transmit or conduct information or communication, shall pass through cross-manufacturer, non-proprietary, industry-standard codes, translation protocols, formats or other information necessary to provide the information or communication in a usable format. Technologies which use encoding, signal compression, format transformation, or similar techniques shall not remove information needed for access or shall restore it upon delivery.

(k)(1) Products which have mechanically operated controls or keys shall comply with the following: Controls and Keys shall be tactilely discernible without activating the controls or keys.

(k)(2) Products which have mechanically operated controls or keys shall comply with the following: Controls and Keys shall be operable with one hand and shall not require tight grasping, pinching, twisting of the wrist. The force required to activate controls and keys shall be 5 lbs. (22.2N) maximum.
(k)(3) Products which have mechanically operated controls or keys shall comply with the following: If key repeat is supported, the delay before repeat shall be adjustable to at least 2 seconds. Key repeat rate shall be adjustable to 2 seconds per character.

| Not Applicable | GSS does not have any functionality related to telecommunications. |

(k)(4) Products which have mechanically operated controls or keys shall comply with the following: The status of all locking or toggle controls or keys shall be visually discernible, and discernible either through touch or sound.

| Not Applicable | GSS does not have any functionality related to telecommunications. |
