

# 5 Tips To Make Your Cloud Security Roadmap Flexible, Agile and User-friendly

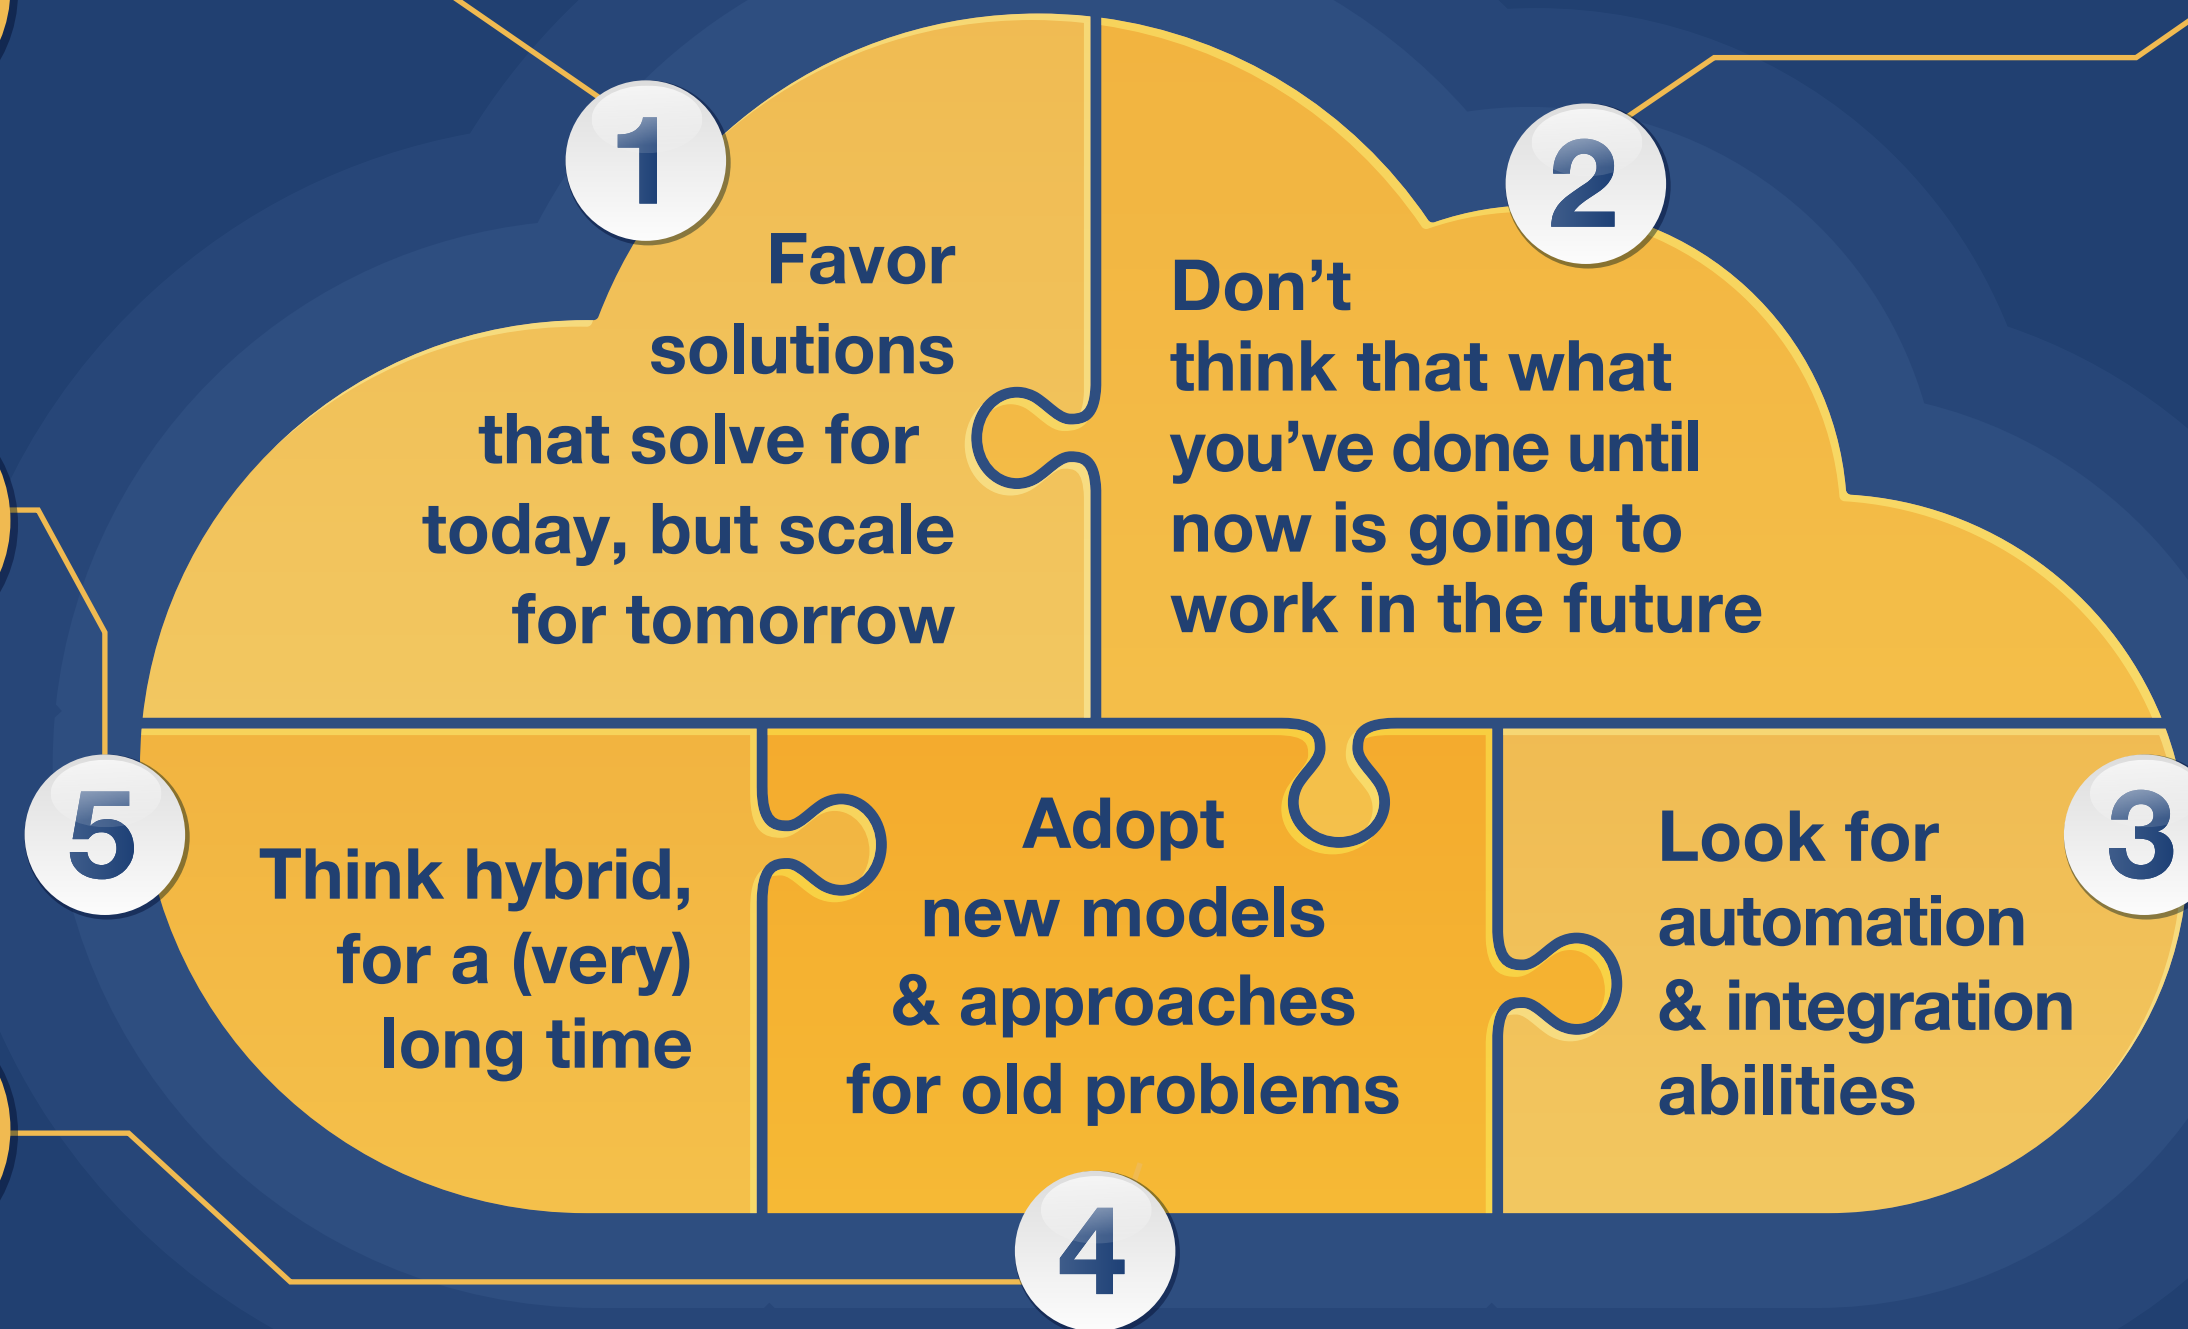

So... How to design a security roadmap that protects your assets wherever they're hosted while still enjoying your cloud perks?

- ✓ Better-quality and speed of services in upcoming projects
- ✓ Scale-out and scale-in to support dynamic loads

- ✓ Evaluate which solutions can give you real support in a hybrid environment
- ✓ A hybrid approach will help you build a better service, which you can deliver faster to your users

- ✓ Shifting from the IP-based perimeter to software-defined-perimeter that creates a Zero Trust approach
- ✓ Determine the level of network access based on identity, device and application context

- ✓ A 'cloud mindset', solutions delivered as-a-service
- ✓ Look for cloud-native solutions that can dynamically and flexibly adjust to your needs

- ✓ Out with the 'boxed' solutions that require complex and expensive integration processes
- ✓ In with solutions that can seamlessly integrate with other tools (open API)

Luminate enables security and IT teams to create Zero Trust Application Access architecture without traditional VPN appliances. Its Secure Access Cloud™ securely connects any user (be they employees, contractors, business partners or customers) from any device, anywhere in the world to corporate on-premises and cloud-hosted applications while all other corporate resources are cloaked.

**ET VOILA!**

NOW YOU'RE READY TO CRAFT A ROADMAP THAT WILL PROVIDE:

Better security across your company's assets

Whether they are hosted in the cloud or on-premises

A better experience to your internal & external users and customers

**luminate**  
Zero Trust. Total Visibility.
