Symantec Endpoint Security Delivers

while the other vendors may focus on just small portions of the attack lifecycle.

Some vendors mainly focus on detecting and responding to breaches. That means a breach has already happened. Symantec goes the extra mile by preventing breaches so they don’t happen in the first place. And for the ones that happen to get through, Symantec offers tools to quickly address and automate a response.

Breach Prevention & Response

And to take a step back on the timeline, Symantec blocks the initial infection to stop attackers from going any further.

Attack Prevention

And to provide stronger protection against the source of infection, Symantec offers the technology to “bolt the windows and lock down the doors” for traditional and mobile devices.

Attack Surface Reduction

And to provide ongoing protection against the multitude of threats, Symantec offers the technology to “lock the windows and turn off the lights” for traditional and mobile devices.

Companies Need Advanced Protection Across the Entire Attack Lifecycle

Symantec Endpoint Security protects traditional and mobile devices across the entire attack lifecycle with attack surface reduction, advanced attack prevention, breach prevention, and response & remediation.

Awards
