

# You just migrated to Office 365. So did all your sensitive data.

Your move to the cloud brings new opportunities as well as new security concerns.

## What security and compliance risks do you face in the cloud?

*“Although many security tools are offered in the standard contract through Microsoft, it’s imperative that Office 365 customers don’t skip over the fundamental basics.”*

**Jeff Falcon,**  
Principal Security Architect,  
CDW

**Email is a top attack vector.<sup>2</sup>**

**4,400,000**

broadly shared emails contain compliance-related data.<sup>1</sup>

## What could a data breach cost your company?

*“We see a lot of instances of people having their Office 365 accounts taken over.”*

**Adrian Covich,**  
Senior Technical Sales Manager,  
Symantec

### Average cost by industry<sup>1</sup>

## How are you helping safeguard Office 365?

*“As companies migrate to Microsoft Office 365 and other cloud applications, they are not always aware of potential threats...”*

**Mark Bowker,**  
ESG Senior Analyst

*“Office 365 offers baseline security features baked in and ready to go...but to get the maximum security, you have to make an effort to add capabilities and turn them on.”*

**Payton Moyer,**  
President and COO,  
MLS Technology Group

**57%**

listed Office 365 as one of the top 5 applications in need of user access and data loss prevention controls.<sup>2</sup>

Office 365 has built-in security.  
**But end-to-end threat protection is your responsibility.**
