Successful cyber attacks are on the rise.

- In the past 2 years, organizations report more than 7.1 billion identities exposed to a successful cyber attack.
- In 2017, nearly 4 in 5 organizations (79%) were attacked.
- In 2016, the number rose to 76%.
- In 2014, the number was 62%.

Threats are more dangerous and numerous than ever before.

- Malicious activities increased from 1 to 3 out of 3 organizations in 2016.
- In 2017, the Internet Security Threat Report by Symantec found that 3 out of 5 organizations were attacked.

Sophisticated protection against today’s security threats.

- Symantec Content Analysis protects against threats through file reputation matching, multiple antimalware engines (to detect known malware signatures), and sandboxing technology.
- Content Analysis sends only 18,000 files for behavioral analysis or detonation in the sandbox.
- Physical security protects your data before it ever leaves your clouds or support main office.
- Hybrid protection ensures that your cloud, mobile, and physical security are all protected.
- Cloud security ensures that your cloud is protected, your mobile app is secure, and all of your business data remains safe.

Ransomware is the average cost of a successful cyber attack.

- In 2016, 1 out of 3 organizations paid ransom in 2016.
- Ransomware is the most dangerous and frequent type of attack.
- Symantec Content Analysis stops threats from entering your network.

Symantec Content Analysis streamlines the work of security operations and security teams.

- Alerts can quickly overwhelm teams, causing thousands of false alarms.
- Generating security alerts is not a problem, but handling all of them is.
- Symantec Content Analysis stops threats from entering your network and helps your teams focus on what matters.
- With Symantec Content Analysis, you can prevent the loss of customer confidence and business continuity.
