Real-Time Threat Protection
Symantec Email Security.cloud has the most effective and accurate email security solution since it uses real-time threat intelligence and cloud-based sandboxing. These technologies are powered by insights from the world’s largest threat intelligence network, allowing Symantec to identify and protect against the latest threats. Symantec Email Security.golden cloud provides you with over 100 million email threats, 125 million spam and phishing attempts, 100,000 malware attempts, 10 million web threats, and 46 million security alerts every second.

Monitoring your Email Security.cloud provides continuous access to these advanced threat analytics.

Advanced threat analytics for golden cloud provide the strongest protection against Business Email Compromise, spear phishing, and other spoofing attacks by blocking threats that typically evade detection by traditional email security solutions. Advanced threat analytics provide: Continuous access to over 1,500 on-demand, online training modules. Published Service Level Agreements by issue severity. No limit on the number of technical support calls or cases created. Web support enabling online case creation using MySymantec. Global reach with 1,200 support professionals in 20 centers. Published Service Level Agreements. This offers: No limit on the number of technical support calls or cases created. Web support enabling online case creation using MySymantec.
