Four Questions Every Information Security Leader Must Answer

For the future of their organizations

Symantec's answer to the security challenge

Strength in numbers

Coverage across the entire attack lifecycle

Symantec's security dream team

Winning combination
Introduction

A cyberattack puts everything at risk—brand, reputation, intellectual property. As a leader of security within your organization, it’s your job to combat attacks and mitigate the damage. Are you prepared to defend your organization? Ask yourself these four questions to determine the strength of your organization’s security across every stage of an attack lifecycle:

1. **Does our threat intelligence program help us make faster, more definitive decisions?**
2. **Does our security operations diagnose critical threats in real time?**
3. **How quickly and effectively do our teams respond when faced with an incident?**
4. **Are we developing our people to protect our organization from an attack?**
Symantec’s answer to the security challenge

With Symantec™ Cyber Security Services, you can address these four key security questions and any shortcomings. Let’s look at how Symantec can help:

1. Does our threat intelligence program help us make faster, more definitive decisions?
Symantec DeepSight™ Intelligence Services leverages technical and adversary threat intelligence to help you understand an attack and deploy timely, effective countermeasures.

2. Does our security operations diagnose critical threats in real time?
With Symantec Managed Security Services, you get a designated service manager and a team of world-class analysts monitoring your organization 24 hours a day, 7 days a week, providing insights on malicious activity that can impact your business.

3. How quickly and effectively do our teams respond when faced with an incident?
Symantec Incident Response Services experts work with you to assess, respond, and contain your organization’s incident before it becomes a full-blown breach.

4. Are we developing our people to protect our organization from an attack?
Symantec Cyber Skills Development Services helps you develop preparedness for attacks by keeping security teams up-to-date on the latest attacker tools and tactics.
Strength in numbers

Symantec Cyber Security Services offers what no other organization can provide—an integrated and purpose-built portfolio of human expertise and advanced machine-learning capabilities and technologies, powered by actionable global threat intelligence:

- 1,000+ certified cybersecurity professionals
- 15+ years delivering advanced threat monitoring and log management
- 12+ average years of active in-field investigation
- 700,000+ threat actors and groups tracked globally
- 1 of the world’s largest cyber-war-games programs
Imagine your organization empowered with a fully staffed team of security experts, each with years of experience within a security operations center or government agency. Symantec delivers a dream team of security professionals, handpicked from organizations and government agencies around the world. The Symantec Cyber Security Services team has the experience and expertise to address every phase of the attack lifecycle.
Coverage across the entire attack lifecycle

Symantec designed each element of the Cyber Security Services portfolio to integrate with the other offerings to fuel your organization’s cybersecurity program with better detection-and-response capabilities across the entire attack lifecycle.

**BEFORE AN ATTACK**
Track and analyze adversary groups and key trends and events around the world for actionable intelligence with **DeepSight Intelligence Services**.

**DURING AN ATTACK**
Detect targeted and advanced persistent threats and campaigns with **Managed Security Services**.

**AFTER AN ATTACK**
Respond quickly and effectively to credible security threats and incidents with **Incident Response Services**.

**BEFORE FUTURE ATTACKS**
Strengthen cyber-readiness across the organization to recognize and prevent new attacks with **Cyber Skills Development Services**.
Symantec DeepSight Intelligence Services

You need a robust threat intelligence program and a clear understanding of the current and emerging threat environment to create a proactive and effective defense. DeepSight Intelligence Services provides a full view of the threat environment so your security team can craft the right strategy for managing cyberattacks.

DeepSight Intelligence Services provides insight that is:

- **Timely:** Intelligence is developed through the continuous monitoring of adversaries.

- **Relevant:** Analysts provide insights organized by technology, industry, and geography so you can address the threats with specific implications for your organization.

- **Context-rich:** The service relies on a full spectrum of intelligence sources, including Web gateways, email, and endpoints, and by tracking adversaries around the globe.

- **Accurate:** Analysts and machines examine the reliability, variety, and quality of sources to minimize errors and ensure quality intelligence.
Symantec Managed Security Services

Managed Security Services advanced security monitoring extends your internal security program by monitoring your environment 24 hours a day, 7 days a week, and utilizing global threat intelligence to detect advanced attacks. Managed Security Services complements infrastructure already in place and helps you better manage your organization’s security.

With Managed Security Services you can:

- **Work with a designated team for around-the-clock monitoring:** Managed Security Services provides access to Symantec's world-class professionals across its Security Operations Centers and Security Response Centers around the globe. You'll work with a designated service manager and team of analysts.

- **Stay focused and pinpoint critical threats:** The solution helps you limit false positives and prioritize activity so your security team can focus on the highest-priority incidents.

- **See more, correlate more, detect more:** Managed Security Services analysts are familiar with the tactics, techniques, and procedures of adversaries around the world and proactively hunt and identify advanced attacks in your organization.

Symantec Incident Response Services

When you handle incidents correctly, you can decrease the cost, duration, and exposure to your business and minimize the impact. By partnering with the Symantec Incident Response Services team, you can move from ad-hoc reactions to a repeatable, optimized program. With a powerful response program in place, you can react decisively when an incident occurs and learn from every attack to better defend against the next one.

Incident Response Services helps you:

- **Develop a programmatic approach to incident response:** The time to build a response plan is not during an incident. Incident Response Services helps you build a repeatable approach to threats, from detection and analysis to readiness team training to containment, eradication, recovery, and post-incident analysis.

- **Stay ahead of adversaries with integrated threat intelligence:** Incident Response Services teams have access to one of the world’s most comprehensive repositories of threat telemetry through the Symantec Global Intelligence Network and Symantec DeepSight Intelligence Services that provide insights on more than 700,000 adversaries around the globe.

- **Partner with the cyberinsurance ecosystem:** Symantec works with brokers, insurance carriers, and privacy attorneys to provide you with the best service in your cybercoverage.

Symantec Cyber Skills Development Services

People are your most vulnerable attack vector. With Cyber Skills Development Services, you can raise the security IQ of all your employees. Symantec provides engaging content and interactive skills development for technical and nontechnical teams. Symantec regularly updates all materials to address current threats.

With Cyber Skills Development Services, you can strengthen cyberwarriors in a virtual battlefield. Symantec’s live-fire exercises immerse your IT team in a simulated environment filled with the latest threats, so they’re prepared to think like the adversary while developing skills in real-world scenarios.
Winning combination

A successful cybersecurity program requires integration and a comprehensive strategy. Each asset in the Symantec Cyber Security Services portfolio is designed to seamlessly work with the others in support of improving your organization’s security posture:

- DeepSight Intelligence Services delivers actionable threat intelligence.
- Managed Security Services provides advanced security monitoring.
- Incident Response Services offers fast containment and eradication of threats.
- Cyber Skills Development Services strengthens your entire organization’s ability to recognize and prevent advanced attacks.
