

Symantec™ Mobile Management Suite

One Solution For All Enterprise Mobility Needs

Data Sheet: Mobile Security and Management

Introduction

Most enterprises have multiple mobile initiatives spread across the organization – some focused on mobile email, some focused on mobile apps, and others focused on mobile content. Within these initiatives, there are diverse ownership models and varying levels of enterprise management possible. In some use cases (corporate owned devices), complete management of devices is needed, but in other cases (personally owned devices), enterprises may only want control of specific corporate apps and data – not the whole device. To achieve these widely varying enterprise business objectives, an ideal enterprise mobility solution should address diverse use cases and ownership models.

Diverse use-cases are common in most enterprises

Overview

Symantec™ Mobile Management Suite is a comprehensive mobile business enablement solution, specifically designed to address a diverse set of enterprise mobility needs.

With scalable device management, innovative application management and trusted threat protection technology, Symantec Mobile Management Suite provides all the capabilities needed for enterprises to enable, secure and manage mobile devices, applications, and data.

Symantec Mobile Management Suite simplifies enterprise licensing by bundling key mobile solutions together with simple per-user subscription licensing.

Product Components

Symantec Mobile Management Suite consists of three products covering mobile device management, application management, and threat protection.

Symantec™ Mobile Management is the **mobile device management** product that provides visibility and control over iOS, Android™ and Windows® Phone devices. Two versions of Symantec Mobile Management are included: a version that can be deployed either as a standalone or integrated with Symantec Endpoint Management (ITMS) deployments and a second version deployed into Microsoft® System Center Configuration Manager environments. Key features of Symantec Mobile Management include:

- Enterprise User Activation
- Configuration Management
- Policy Management
- App and Content Distribution
- Compliance Enforcement
- Selective Wipe
- Secure Email
- Asset Management

Symantec Mobile Management is employed in use cases where complete device management is required or desired. Typical use cases include mobile email deployment, BlackBerry® migration, mobile policy management, mobile configuration management, etc.

Symantec™ App Center, formerly Nukona App Center, is the **mobile application management** product that provides comprehensive distribution and protection for mobile apps/content on iOS and Android devices. Corporate apps are containerized using a unique technology that doesn't require source code changes, and enables clear separation of corporate and personal data on the device. Key features of Symantec App Center include:

- Enterprise App Distribution
- App Protection Policies

- Enterprise Content Distribution
- Content Protection Policies
- Selective Wipe

Symantec App Center can be employed in use cases where complete device management cannot be employed or is not needed, and where control over just specific corporate apps and data is desired. Typical use cases include mobile application deployments, and mobile content driven deployments, in both corporate and personally owned BYOD environments.

Symantec™ Mobile Security is a **threat protection** product that provides award-winning antivirus technology, advanced firewall, and Symantec Mobile Security antispam functionality for Android and Windows Mobile platforms. With centralized policy-driven management and reporting, Symantec Mobile Security helps ensure there are compliance policies in un-trusted ecosystems. Key features of Symantec Mobile Security include

- Antimalware
- Web Protection (safe browsing)
- Anti-theft
- Enterprise Policy Management
- Application Blacklisting
- Visibility & Compliance
- Integration with Symantec Mobile Management

Symantec Mobile Security can be employed in use cases where end users download apps of their choice from any app store in the Android ecosystem. Typical use cases include securing sizeable Android deployments in global user bases, field users and contractors, as well as securing legacy Windows Mobile and CE operational devices.

Licensing & Pricing Details

Symantec Mobile Management Suite simplifies the licensing process with a per-user subscription model. As end users carry multiple devices in the form of smartphones and tablets, enterprises are forced to pay multiple times for the same user. With Symantec's new model, IT teams no longer need to count the devices and instead use a simpler user count. Additionally,

Symantec Mobile Management Suite uses subscription based pricing, so organizations can better address their capital and operational expenditures.

Key Benefits

- **One Solution for Enterprise-Wide Mobile Deployments:** BYOD, COPE, COIT – whichever deployment models you choose to support, Symantec Mobile Management Suite provides a modular and scalable solution for all mobile initiatives and use cases.
- **Complete Protection for Enterprise Mobility:** With trusted protection at the device, app and data layers, Symantec Mobile Management Suite ensures that corporate data is isolated and protected from data loss, malware, and unauthorized access.
- **Lower Total Cost of Ownership:** With users carrying multiple devices, Symantec Mobile Management Suite makes it cost-efficient with a per-user model (instead of per-device). In addition, integration with enterprise management products and automation tools enable operational efficiencies.

System Requirements

- Windows® Server 2008, Microsoft® SQL Server® 2005/2008
- Red Hat® Enterprise Linux® (RHEL) 5.5, Oracle® 11.2

Devices Supported

- Apple®: iOS 4.3 and higher
 - Google: Android 2.2 and higher
 - Microsoft: Windows Phone 7.0-7.5
 - Windows Mobile 6-6.5
-
